Kupkin, S. A.
PROPHYLAXIS AND TREATMENT OF DISEASE IN CALVES BY MATERNAL BLOOD (Lecheniye i Profilaktika Bolezney Telyat Krov'yu Materi). Dec 60 [7]p. RTS 1727.
Order from LC or SLA mi$1.80, ph$1.80 61-15385

Trans. of Veterinariya (USSR) 1955 [v. 32] no. 2, p. 38-42.

Transfusion of maternal blood, which is assumed to contain compatible proteins as well as antibodies, has been used consistently at the Bryansk collective farms since 1949 for prophylaxis of paratyphoid and coliform bacillus infections in calves. Blood transfusion has undoubted advantages over serum injection. Transfusions of maternal blood were used effectively, alone or in conjunction with other therapeutic agents, in treatment of digestive disorders, diseases of the respiratory system, and coliform bacillus and paratyphoid infections. Transfusions had little effect on calves suffering from vitamin A deficiency.
